Bountiful Ridge Nurseries

AGAIN LEADS THE WAY

In Producing Superior Fruit Trees and Berry Plants that Give Universal Satisfaction at Prices That Represent America's Greatest Values in Nursery Stock

The Day is Past When The Planter Can Afford to Buy "Just a Tree or Plant"!

Our Listings of New Varieties and Selected Types of Older Varieties Point the Way

To Greater Production - Greater Consumer Satisfaction - Greater Profits to The Grower

Three Generations, With Over 75 Years of Fruit Tree and Berry Plant Production Experience
 Bring You The Best Stock Man's Ingenuity Can Grow.

THRIFTY—HARDY—DEPENDABLE PLANTING STOCK LEADS TO SUCCESS.

LET US HELP YOU TO PLAN AND PLANT FOR FUTURE PRODUCTION AND PROFIT.

ADVANTAGES OF FALL PLANTING

Our years of experience in the nursery and orchard business has taught us that everyone should practice fall planting, whenever it is possible to do so, providing climatic conditions throughout the winter are not too severe, and also providing they can obtain well matured nursery stock. We especially recommend the planting of fruit trees and small berry plants, with exception of Strawberry plants, in most locations, but in case of doubt write us and we will advise if it is practical for your particular territory.

The advantages of planting in the fall are; that the grower can get freshly dug stock which never goes through storage, and when planted from nursery row to orchard, the roots will quickly heal where cut when dug. Also winter rains will firmly set the dirt about the roots and the tree is ready to start with the first sap movement in spring. Again by fall planting the grower has time to give more attention to this work and better results will be obtained by the extra attention to the planting.

By fall planting, we mean anytime that the ground is not frozen or the air temperatures not below 40 degrees during the fall and early winter months. Should a cold snap come while planting, wait until it warms up and go ahead, but be sure to mound a cone of earth around the tree about 12" high to afford support, drainage and protection from winter winds. Note here, however, that we do not recommend planting to be made on land which has a tendency to heave from frost, unless the tree is treated as above, and in the case of plants, that they be heavily mulched. In all cases do not trim or cut back the tree until spring.

Again be sure the nursery stock is well matured, and if you deal with a responsible nurseryman, he will not ship until the stock is right. Should you desire fall planting we will do our part to give you the right kind of stock. Let your order come forward so we can prepare to ship at the right time.

DELIVERY SERVICE

Our policy of giving free delivery on all orders of \$50.00 or more to distances of within five hundred miles of our nursery will be continued this year in spite of the fact that freight rates have been advanced. Where orders are large enough to justify it, our trucks will deliver direct to your farms. This means less than forty-eight hour service on your stock from the time it is dug until it is delivered, ready to plant. Special freight allowances will be made on large orders received from a distance of more than five hundred miles from our nursery.

SAVE 5c ON EVERY \$ SAVE 5c ON EVERY \$

We allow a cash discount on all orders received before April 1, 1940. Where cash accompanies the order, five per cent may be deducted, and also on large orders where twenty-five per cent of the amount is sent with the order and the balance is to be paid on delivery of the trees or remittance made before shipment. Put your money to work and take advantage of this liberal discount. **Buy and plant Bountiful Ridge grown trees and plants this fall. Make an investment for future income. Order promptly. Our low prices are guaranteed only until January 1, 1940.**

GE —
 which will you plant—Yearling Peach Tree or June Bud Peach Tree.

We are going to present a few facts about the growing of peach trees by these two methods and let you be the judge as to which type of tree you should select for planting.

1. Yearling peach, or dormant bud peach as they are sometimes called, are produced by planting the peach seed in the fall, allowing the seedling to grow during the following summer, the tree then being budded in August, as a rule. This bud remains dormant until the following spring when the seedling top is removed and the bud allowed to grow, giving the bud a full summer to make its growth and maturity. In the yearling tree you have a root growth of two years and a top growth of one year.

2. June budded peach are produced by planting the seed in the fall, budding these seedlings early the following summer in May or early June. At the time of budding, the seedling is cut or broken in the top, and as soon as the bud starts, the seedling is further broken down, and in a short time the entire top of the seedling is removed. As the bud starts its growth the branches are suckered out to a certain height. This is done principally to force the tree to a greater height. Under favorable conditions June budded trees grow very rapidly and in most cases are dug and sold to the planters the same year, thus giving him only a one year root and a one year top to the tree.

It has also been found that yearling peach trees have proved more disease resistant to many of the common diseases of the peach tree. The yearling peach tree has a harder wood and a harder root system in which to store an abundance of vitality and natural stamina for resisting diseases, which the young and more tender wood of the June budded trees does not have, due to its very short growing life.

We Present "The Bountiful Ridge Peach World"

In A Succession of Recent Outstanding Introductions in Addition to The Old Popular Varieties Which Have Proved Their Superiority and Ability to Produce Profitable Crops

● Never in The History of The Peach Industry Has The Grower Had Such an Outstanding List of Varieties to Select From Which Are Adapted to All Producing Sections—A Peach For Every Section—A Peach For Every Purpose.

● Never Have We Grown A Finer Lot of Thrifty, Vigorous, Disease Free, Hardy Peach Trees. They Are Ready To and Will Give Results Wherever Planted.

● We Are Maintaining Our Low Prices This Fall To Save You Money and Let You Plan and Plant For Future Success and Profit.

● Buy Your Peach Trees This Year Direct From "Bountiful Ridge Nurseries."

● Act Today. These Prices Are Only Effective On Orders Received Before January 1st, 1940.

ERLY-RED-FRE

U. S. PLANT PATENT NUMBER 320

Grown and For Sale Exclusively By Bountiful Ridge Nurseries.

The Erly-Red-Fre Repeats In 1939, Proving To Be A Real Thorobred.

It Proved Definitely Resistant to Late Frost Injury!

It Proved It Would Size Up Well With Lack of Normal Rainfall!

It Proved to Carry As Well As Elberta When Shipped!

We Predict the Erly-Red-Fre Will Become—

"AMERICA'S LEADING EARLY PEACH" and

"THE SOUTH'S GREATEST MONEY MAKING EARLY FREESTONE PEACH, RIPENING AT RED BIRD SEASON."

Let the consumer eat LARGE, HANDSOME, FREESTONE peaches of unsurpassed quality at the beginning of your Peach season by planting and growing ERLY-RED-FRE.

The "ERLY-RED-FRE" originated as a chance seedling in the orchard of Wm. Perry near Chase City, Va. Apparently the "ERLY-RED-FRE" is the result of the planting of a Red Bird Peach Seed planted fall of 1928. Our attention was first called to this splendid peach in 1935 and we instructed Mr. Perry to bud the variety off to see whether it would produce true to type in succeeding generations. The second generation trees bore in 1937 at 2 years of age, the fruits on these being identical with those on the Parent tree. The original tree and second generation trees both bore a heavy crop in 1938, it being necessary to thin the fruit on all trees. These same trees repeated in 1939, having a normal crop on them which was thinned lightly, when other varieties in the same orchard were killed out almost entirely with late frosts. We have never in all our observations of peaches known of an early peach having so many good characteristics which are so outstanding. The fruit borne in 1939 being the finest specimens we have yet seen of the variety. The tree blooms medium early, the blossoms being medium open type, pink and self-pollinating. We picked the first fruits of 1938 crop June 11th, the main crop being harvested between June 14th and 20th. The first peaches were picked from the trees June 20th in 1939 crop, all peaches being picked from the trees by June 28th, the ripening season being just a little later due to seasonal conditions and fertilization methods followed in 1939. The first fruits each year were picked with the first fruits of the Red Bird variety and continued on thru the Red Bird and the beginning of the Greensboro season. The fruit is very highly colored with an attractive bright red on a creamy white background. The skin is tough and medium thick. The flesh of the peach is of such texture that it does not show bruises through the skin for several days after being bruised and is a clear white through to the pit. We believe this peach has one of the smallest pits of any cultivated peach we know of in existence.

Specimen peaches we have sent out by Express and P. P. have carried up to 1000 miles in perfect condition and remained edible for several days after arrival. We have actually kept tree ripened peaches for 12 days after picking without any refrigeration. The peach shows unusual quality, being equal to a tree ripened Belle of Georgia. The peach resembles the Hiley Belle in shape when ready to pick. The fruit averages large for an early peach, some specimens weighing 12 ounces and the entire crop under normal conditions and care can be packed out 2 1/4" and up if desired. The tree is very vigorous, resistant to Bacteriosis, bears while very young and is very productive. The season of 1938 was abnormally wet and the Erly-Red-Fre proved very resistant to Brown rot; Red Bird in the same orchard under same care being almost a total loss. The 1939 season was abnormally dry prior to harvest time and again the peaches held up well and sized up, so it would seem that the peach will adjust itself to seasonal conditions and give results beyond that of most Early peaches. This peach originating in the temperate regions should adapt itself to most all peach producing areas North, South and West. It should prove one of the best money making peaches ever offered Southern Peach growers, because it is definitely the FIRST RIPENING FREESTONE PEACH NOW IN CULTIVATION TO OUR KNOWLEDGE, FOLLOWING CLOSELY THE MAYFLOWER AND PRECEDING THE GOLDEN JUBILEE SEVERAL WEEKS.

The following are the prices as established on the Erly-Red-Fre variety of peach tree for delivery during the fall of 1939 and spring of 1940. These prices are subject to our usual discount of 5% and free delivery of stock on all orders of \$50.00 or more within a radius of five hundred miles of our nursery.

NOTE: This variety is protected by U. S. Plant Patent and cannot be propagated by anyone other than Bountiful Ridge Nurseries for any purpose.

Bountiful Ridge Trees Prove Their Ability To Grow and Produce In Alabama.

1600 18-24 in. Bountiful Ridge Peach Trees Average Over 6 ft. Growth First Year—Produce Over 1/4 bu. Peaches the 3rd Growing Season. Only 1 Tree Not True to Label.

Mr. C. J. Mitchell of Stanton, Ala. sent us the above photograph stating this was an average tree in his orchard of 1600 trees planted in Dec. 1936, the photograph being taken the following August. This is their 3rd growing season and are averaging more than 1/4 bu. of peaches to the tree and ONLY 1 TREE IN THE ENTIRE PLANTING IS FRUITING NOT TRUE TO LABEL. These trees were our small yearling peach trees 18 to 24 inch grade. Mr. Mitchell is justly proud of this orchard and it proves the ability of Bountiful Ridge Trees to grow and produce wherever they are planted.

The FISHER Peach

U. S. PLANT PAT. NO. 233

Nature Triumphs—Giving Us a Distinct New Yellow Peach of Superb Appearance and Quality Ripening 10 Days Before Golden Jubilee. The Fisher Peach Leads the Parade of Yellow Freestone Peaches With Universal Commercial Possibilities.

The Fisher Peach Is Hardy—Medium to Large Size—Highly Colored With Handsome Appearance, Superb Quality and Shipping Ability.

Growers In All Peach Producing Areas Can Realize Its Possibilities. Step Up Your Yellow Peach Season By Planting Fisher Peach Trees This Year.

The FISHER peach was discovered as a bud sport of the VALIANT in August 1934 near Queenstown, Ontario, Canada. Mr. Fisher found these large well formed peaches growing on a single limb of a Valiant tree in his orchard, being attracted to the peach from the fact that it was ripening fully 3 weeks before the Valiant peaches on the rest of the tree. Realizing the commercial possibilities of a peach of this type and season, Mr. Fisher's next concern was whether the fruit would carry through to succeeding generations. To test it as quickly as possible he top worked a two year old Valiant tree with 12 buds from the Sport limb the first week in September, 1934. The Parent limb again bore a heavy crop in 1935 and the peaches developed as they did in 1934. THE PEACH WAS MEDIUM TO LARGE, YELLOW FLESHED AND A FREESTONE. THE PEACH HAS A DARK RED BLUSH COVERING NEARLY HALF OF THE PEACH; EXCELLENT FLAVOR, FINE GRAINED FLESH SHOWING NO RED ABOUT THE PIT. The Parent limb repeated with a fine crop in 1936 and the top worked tree set a crop which required thinning, the remaining peaches on the top worked tree developed exactly as those on the Parent Limb. HERE WAS A PEACH OF FINE QUALITY. A YELLOW FREESTONE PEACH. In 1937 Mr. Geo. W. Kemp and Mr. Homer Kemp of our nursery journeyed to Canada to see this peach. The original limb as well as the top worked tree had a fine crop and on August 12, 1937 we photographed the peach in colors with our moving picture equipment. We also photographed the Marigold, Oriole and Golden Jubilee in the same orchard so as to give the comparative season of them.

Mr. Geo. W. and Homer Kemp again went to Canada in 1938 to observe the FISHER PEACH on the original tree and second and third generation trees all of which came through again with a fine crop in 1938. Our first opinions of the peach were further confirmed. More color photographs were taken of the peaches as they were on the tree. THE BOUNTIFUL RIDGE NURSERIES HAVE ENTERED INTO A GROWING AND DISTRIBUTION CONTRACT WITH MR. FISHER FOR THE DISTRIBUTION OF THE FISHER PEACH TO THEIR CUSTOMERS IN THE UNITED STATE AND CANADA.

Please refer to our 1938 catalog for color illustration of the FISHER PEACH. We feel no grower can afford to not make at least a trial planting of this Peach and we advise that you place your reservation as early as possible for the supply of trees is again limited this year.

WARNING: The Fisher peach is a patented variety which cannot be propagated for any purpose by anyone other than the authorized growers and distributors.

NOTE

Ripening order of varieties designated by bracketed numbers after name. Varieties overlapping in ripening season indicated by sub-letter. Example, Elberta and Hale are about same season and are designated by numbers 13 and 13A. We have endeavored to give you authentic ripening order of varieties, we list, but variations may occur due to soil, fertilization and climatic conditions.

MAYFLOWER. (1) Earliest peach. Red all over, size medium, quality good, semi-cling.

MIKADO. (2) The Mikado is again being given a great deal of publicity as a hardy, productive, early yellow peach ripening about two weeks after Mayflower or six weeks before Elberta. The tree is of medium size and vigor and should be interplanted with other varieties for cross-pollination. The fruit is medium in size, round, semi-cling, attractive yellow and blushed with red. Quality is very good.

RED BIRD (Early Wheeler). (3) Earliness, high color and productiveness make it very valuable. Cling, very large. Creamy white over-spread with a bright, glowing red. Good shipper.

ERLY-RED-FRE. (3a) See opposite page.

GREENSBORO (Semi-Cling). (4) Large yellow with splashes of bright red; highly colored; flesh white, very juicy and of good quality. Hardy, early.

EARLY ROSE. (5) A white cling peach. Variety is a favorite with Southern peach growers.

FISHER PEACH. (5a) See opposite page.

ORIOLE. (6) Introduced by New Jersey experiment station in 1925 an early yellow freestone peach ripens a few days ahead of Cumberland. Fruit medium size, yellow in color, blushed with red, and notable for fine quality. Tree is vigorous and productive. The fruit buds are very resistant to cold and will grow where others fail.

CUMBERLAND. (6a) A N. J. Station Product. A seedling crossed with Greensboro. The tree is a vigorous grower and as hardy as Carman. The fruit is larger than Belle of Georgia; attractively colored with red, oval in shape. The flesh is white, almost free, firmer and better quality than Carman or Alton. Ripens just before Carman.

GOLDEN JUBILEE (6B)

A PROVEN MONEY MAKER

No General Planting of Peaches is Complete Without A Liberal Amount of Golden Jubilee Trees.

A development of the New Jersey Experiment Station, first offered by us during the Fall shipping season of 1928. Planted and producing in every peach producing section of the United States and Canada and stands without an equal as an early, yellow, freestone peach of exceptional quality. The Golden Jubilee is a second generation seedling of the Elberta crossed with the Greensboro. The tree is unusually hardy. The buds resist low Winter temperatures better than Elberta and open later than Elberta which insures a regular crop. The blossoms are self-fertile. The peach is medium to large size and firm. The peach develops better if a well balanced fertilizer is used. As the tree grows older the fruit becomes firmer and develops more naturally. It proved to be the best money-making peach of the South this year, many sales running as high as \$3.00 per bushel. Ripens about four to five weeks before Elberta.

CARMAN. (6c) Hardy, sets fruit well, early white peach, red color, flesh medium fine, juicy. A home market variety.

RADIANCE. (7) Large oval, white fleshed freestone, good quality, good color, ripens after Carman.

FAIRS BEAUTY. (7a) An early peach following Golden Jubilee three to five days. Tree vigorous, spreading, very hardy in bud, often producing a crop when other varieties are winter killed. Fruit is medium to large in size, skin a deep golden yellow blushed with bright red, the flesh is firm, tender, melting and juicy. Fruit hangs exceptionally well to tree and when full ripe is a perfect freestone, clinging slightly when the peach is hard ripe, an excellent market and canning peach.

ROCHESTER. (8) Large, yellow and red peach. Flesh yellow and of fine quality.

COLORA PEACH (9)

Possibly The Most Outstanding Hardy, Early, Yellow Freestone Peach in Cultivation.

Tree and Buds Stand Low Temperatures Where Other Varieties Fail.

High Color, Superb Quality, Size, and A Market Leader Are Reasons Why You Should Plant Colora This Year. Introduced in 1936.

Our own introduction of a new frost resistant, yellow freestone peach. Second generation trees as well as the original branch have withstood temperatures during the past winters of about 17 degrees below zero, when most other varieties such as Elberta, Hiley Belle, Belle of Georgia, Early Elberta and J. H. Hale were wiped out by these low temperatures. The peach is an attractive yellow, freestone well-colored and of excellent quality, ripening about 15 to 20 days before Elberta. In size, it is about the same as Elberta. We believe the planters will find this a valuable variety for planting in cold areas.

NEW EARLY HILEY. (9a) A new strain of this famous peach originating in Georgia. Has all the characteristics of its famous parent, but is a full week earlier in ripening.

VEDETTE (9B)

A Peach of Proven Merit Adapting Itself To Southern Peach Areas.

Size, High Color, Excellent Quality and Shipping Ability Establish the Vedette as One of the Leading Peaches to Follow the Colora.

A product of the Vineland Experimental Station, a seedling of Elberta, resembling that variety in color and type of flesh, but is more globular in shape, more highly colored, and of much finer quality. The fruit is large size, yellow fleshed, freestone. The tree is vigorous, very hardy, comes into bearing early and is very productive. The Vedette is proving very satisfactory in trial plantings near Columbia and Clemson, South Carolina. The fruit is firm and a good shipper, ripening about one week after Golden Jubilee. A fine peach that promises to be a real money-maker for the Southern Planter.

HALE HAVEN (10)

North—South—East—and West Join In Acclaiming This Great Peach. Hailed By Many and Conceded To Be "The Greatest Peach of All Time For Its Season."

We Endorse and Recommend This Great Peach to Growers in All Sections Where Size, Color, Quality and Shipping Ability Are Paramount Considerations.

We know of no Peach of recent introduction that is proving so universally satisfactory as the Hale Haven. It has proved an unchallenged leader of peaches to follow the Golden Jubilee, Colora, Vedette. The tree is a strong thrifty grower resistant to common peach diseases, the fruit is large, oval shaped like a well grown J. H. Hale, it has a good tough skin, the flesh of the peach being of such texture that it will not bruise easily and best of all it has a beautiful, handsome red color that at once attracts the buyer and a flavor that is as good as the very best. The Hale Haven is a product of South Haven Experimental Station, in Michigan. Note the success of this variety in test plantings in the South. The South can now grow a large Yellow peach in place of the old Hiley that will bring much higher prices on the markets. Wherever you are located you cannot go wrong by planting liberally of the Hale Haven. BE SURE YOU ARE BUYING THE TRUE STRAIN OF HALE HAVEN TREES WHEN YOU PLANT. BUY BOUNTIFUL RIDGE GROWN HALE HAVEN TREES.

SOUTH HAVEN. (10a) An excellent peach, tree thrifty and productive. Peach of Elberta type, ripening 15 to 18 days before Elberta. Freestone, yellow fleshed, ripens its crop over a period of ten days, making it desirable for local or roadside markets.

HILEY BELLE. (11) Medium size, white fleshed, freestone peach, beautiful red blush, and tough skin, juicy and tender.

SLAPPY IMP. (11a) A selected strain of Slappy which we consider superior to the regular Slappy variety. Yellow freestone, very good quality, ripening Hiley Belle time.

VALIANT. (11b) A seedling of Elberta introduced by Experiment Station, Vineland, Ontario, Canada. A large yellow fleshed, high colored peach, ripening 3 to 7 days after Vedette. Excellent quality fruit, hardy tree and very productive. We recommend the Valiant.

GOLDENEAST (N. J. 87). (11c) A large, firm oval, highly colored commercial peach ripening at the Hiley and Eclipse season. Usually a freestone. A promising variety for sites south of central New Jersey where favorable elevations, soil and climate prevail. A recent development of the N. J. Experimental Station.

ECLIPSE. (11d) Dark red, yellow fleshed, freestone peach, firm texture, good flavor. Ripening with Hiley.

CHAMPION Free. (11e) Large yellowish-white mottled with red. Flesh white and red at pit.

CRAWFORDS EARLY. (11f) Large, round, bright yellow with red cheek, flesh yellow, juicy, sweet, quality good.

FITZGERALD (Free). (11g) Improved Early Crawford. A bright yellow blushed with red. Flesh deep yellow and of best quality. Early freestone.

These trees were Bountiful Ridge Grown 3-4 ft. grade, yearling stock of the Hale Haven variety, planted Dec. 10 to 15, 1936 at Sand Hill Experiment Station near Columbia, S. C.

Planted in light sandy soil with only soiling crops used as fertilizer they averaged 7 to 8 feet after two growing seasons.

The producing records of this orchard for 1939 shows they averaged more than 1/2 bushel of U. S. No. 1 peaches to the tree, many peaches being over 3 inch size. This demonstrates the adaptability of this great peach to southern growing conditions as well as the adaptability of Bountiful Ridge trees to varied soil and climatic conditions.

Careful Variety Selection Today Insures Success Tomorrow

EARLY ELBERTA (12)

A Great Commercial Peach Ripening Just Before Regular Elberta.

Where Quality — Size — Productiveness and Beauty Is Desired, Plant Our Old Original Strain of Early Elberta. There is a difference.

A great commercial peach in the Central and Northern peach producing areas where the markets are not too distant and quality is a deciding factor. One of the most beautiful of the Elberta type peaches. A very large, attractively colored, yellow flushed, freestone peach ripening with Belle of Georgia or from 3 to 8 days before the regular Elberta. The highest quality peach of all the Elberta types grown commercially. The trees are hardy, thrifty, and bear consistently. The deep lemon yellow colored skin, blushed with bright red makes it very attractive and the peach retains a beautiful golden yellow color after being canned. IF YOUR MARKET DEMANDS QUALITY AND BEAUTY PLANT THE EARLY ELBERTA. Our trees are propagated from the old original strain of Early Elberta.

PRIMROSE. (12a) A large yellow fleshed, freestone of good quality, ripens with Belle of Georgia.

BELL OF GEORGIA (12B)

The White Peach That Has Stood the Test of Time and Stands Today as the Leader of All White Peaches of Its Season Adapted to Large Commercial Plantings in All Peach Producing Areas.

Fruit large, bright attractive red almost covering the peach with white background. Flesh white, highly flavored and very firm and known universally as one of the best shipping white peaches in cultivation. Tree very vigorous, hardy and productive. Are you planting to supply the demand for a good white peach? Plant Bell of Georgia.

... The Famous Elberta Again Registers in 1939 as America's Leading Commercial Peach.

The Peach With A Pedigree—and The Worlds Greatest Money Making Peach.

Year after Year This Great Peach Brings A Smile of Satisfaction To The Growers Countenance.

Years of Propagation Have Produced Many Inferior Strains of This Famous Peach and Are Responsible For Much Unjust Criticism of Quality and Type.

Plant Bountiful Ridge Selected True Strain Elberta For Greater Profits and Consumer Satisfaction.

ELBERTA. (13) Without question the greatest commercial peach ever introduced. It has proven its ability to adapt itself to varied climatic and soil conditions throughout the U. S. and Canada, whether the climate is hot or cold, whether the soil is light sand or heavy clay, Elberta can be depended on to give you fine results. There is no prettier peach when grown under ideal conditions.

The tree is hardy, disease resistant very thrifty and very productive under most conditions. The fruit is large to very large, a freestone, skin a deep golden yellow and highly colored. The skin is tough and the flesh, white, tender and juicy, is of such texture that the ELBERTA IS FAMOUS FOR ITS ABILITY TO CARRY TO DISTANT MARKETS. The quality is classed as good, and the slight bitter flavor is preferred by many. It is estimated that 50% of all peaches planted are Elberta. As improved types and varieties are introduced this ratio is lowered but after all is said ELBERTA STILL REMAINS THE WORLDS LEADING COMMERCIAL PEACH. We are propagating our Elberta trees from selected orchards of great bearing records and to the old original type of Elberta. Last year we cut budwood from 43 year old Elberta trees which had borne 38 years without a crop failure. We know our Elberta trees will give you results.

J. H. HALE. (13a) Skin deep crimson, smooth type without fuzz, flesh golden-yellow, firm, has delicious flavor. Valuable as a commercial peach. Will ship nearly as well as an apple. Ripens a few days before Elberta. Self-sterile blossoms.

SHIPPER'S LATE RED (14)

Fast Becoming A Favorite Wherever Planted. Hard To Equal As A Large, Productive, Handsome Peach To Follow Elberta.

A large, very highly colored attractive red, yellow fleshed freestone and good quality peach, of distinct Hale type. Ripens just after Elberta and J. H. Hale. A good shipping peach, extremely productive, very hardy and its beauty and size enables it to bring top prices on the markets. This splendid variety should be planted more extensively as we know of no variety we can recommend more highly for a peach to follow the Elberta.

Much confusion exists regarding the various strains of this variety. We are growing the true type as determined by comparison with fruit in U. S. D. A. test orchards.

PEACHES TO PLANT

Quality - Appearance - Productive

WE PRESENT ONE OF THE GREATEST SUCCESSION OF HIGH QUALITY PEACHES THE PLANTER HAS EVER HAD THE OPPORTUNITY OF BUYING. PLANTING THESE VARIETIES MEANS GREATER SUCCESS IN PEACH GROWING.

Plant Bountiful Ridge Trees for Quick, Dependable Results

GAGE ELBERTA (14A)

A Disease Resistant Bud Sport Of The Famous Elberta Peach, Which We can Recommend Highly.

This splendid peach originated in the orchards of Mr. John Gage near Texico, Illinois. Recommended for resistance to bacterium pruni. The tree grows thrifty as the Elberta and looks much like the old time Elberta. Gage Elberta blooms from two to four days after Elberta and apparently has a very strong blossom setting a crop of fruit under unfavorable conditions. The fruit is so near the Elberta that only an expert can distinguish the difference. It ripens two to three days later than Elberta.

This variety is proving well adapted to the Southern conditions in the trial plantings at Columbia and Clemson, South Carolina and is to be preferred over the Elberta in many respects.

Very favorable reports are coming to us from Ohio, Indiana, and Illinois on the Gage Elberta and some large orchardists are planting it in preference to the Elberta in large quantities.

THE BRACKETT PEACH. (14b) This is a comparatively new variety in some sections, but has been tried and proven one of the most profitable peaches in the South. Its season is about five days after Elberta, with a beautiful orange-yellow skin tinged with carmine. Flesh is a deep yellow and much higher flavored than Elberta. This peach sizes up well under heavy crops and is equal to Elberta as a shipper. A perfect freestone.

HOPE FARM. (15) Introduced by us in 1925. A large white fleshed freestone peach of superior quality. Follows the Elberta about five days in ripening. Partially self-sterile. Fine for roadside market.

WILMA. (15a) Very large, late yellow freestone peach, fine color, good quality, ripens 5 to 8 days after Elberta. Tree hardy.

CRAWFORDS LATE (Free). (16) Large, roundish, oval, yellow with broad red cheeks, flesh yellow, very good.

ROBERTA (Augbert). (16a) Very similar to Elberta except its season. One week to 10 days later.

IRON MOUNTAIN. (17) Free, white medium to large size, color poor, white with slight blush, good quality, good keeper.

LIZZIE. (17a) Distinct Elberta type peach, very large, freestone, yellow flesh, excellent quality. Ripens 12 to 16 days after Elberta.

SALBERTA. (18) Large yellow freestone peach, Elberta type, good color and quality similar to Roberta. Ripens 1 week later.

HEATH CLING (Cling). (18a) Very large, creamy white with delicate red blush, flesh white, juicy and sweet. Valuable for canning.

SALWAY (Free). (19) Large, round, deep yellow with rich red cheeks, flesh yellow, firm. Trees hardy. Late market sort.

KRUMMEL'S OCTOBER. (20) Fine peach, best late yellow freestone, ripening after Salway or 6 weeks after Elberta. Medium large, almost round, deep yellow, carmine shaded, very firm.

APRICOTS

MOORPARK. Largest, orange-yellow flesh, sweet, juicy and rich. August.

EARLY GOLDEN. Good variety, very large, deep golden-yellow, fine quality. Tree large, thrifty, hardy. Fruit beautiful, yellow flesh, firm and solid. (See prices next column).

MOHR'S APRICOT

Apparently a new apricot coming to us from Mr. Frank Mohr near Fogelsville, Penna., having many characteristics which recommend it for home and commercial planting. It is extremely hardy, bearing often when peaches fail; very productive. Fruit is large and a freestone. Flesh firm, solid and excellent quality. Colors a deep golden yellow, ripens early in season being ripe at Fogelsville early in July. All Apricot budded on Plum root.

All varieties: 4-5 ft. 9/16 branched, each, 60c; 10 trees for \$5.00; 3-4 ft. branches and whips, 50c each, \$4.00 for 10; 2-3 ft., 40c each; \$2.50 for 10.

The New Sure Crop Nectarine

Imported to this country from New Zealand. The tree is vigorous and productive. The fruit is large, roundish, white and overlaid with very attractive red. The flesh is firm, tender, free from stone, and very pleasing flavor. Late mid-season.

	Each	10	50

Mr. A. T. Lynd showing growth of his young peach trees. Note well branched tops. Planted Spring of 1938; photographed August of 1938.

42 INCHES OF GROWTH FOUR MONTHS AFTER PLANTING. OHIO CUSTOMER WILL ALWAYS PLANT BOUNTIFUL RIDGE TREES IN THE FUTURE.

Pataskala, Ohio
August 24, 1938
Gentlemen:

The above is a picture of Bountiful Ridge trees planted on the farm of A. T. Lynd & Sons, Licking County, Ohio, spring of 1938, measuring 42 inches growth to date. We planted 2,000 Bountiful Ridge Trees in '37 and '38, and Bountiful Ridge trees for us from now on.

A. T. Lynd

His Majesty "The Apple"

Reigns as the "King of Fruits"

OUR VARIETY LISTINGS LEAD THE
"MARCH OF PROGRESS TO BETTER FRUITS."

TODAY, MORE THAN EVER BEFORE, THE PROGRESSIVE PLANTER REALIZES THE PARAMOUNT IMPORTANCE OF VARIETY SELECTION—TREE SELECTION AND JUDICIOUS PLANTING AS AN INVESTMENT, FOR FUTURE PRODUCTION AND FUTURE PROFITS.

Recent Surveys Report An Alarming Depletion In Apple Tree Population. Established Facts Show We May Expect A Further Decrease Of Many Millions Of Bearing Trees, Due To Age, Disease And Abandoned Orchards, And If We Are To Maintain Present Apple Production More Than 50 Million Apple Trees Must Be Planted In The Next 10 Years. Consider These Facts And Plan To Plant This Year.

BLAXTAYMAN
TRADE MARK REG. U.S. PAT. OFF.
APPLE

The fruiting record of the Blaxtayman has established it as one of America's foremost commercial apples and a leader of all improved types of Staymans now being offered. It is truly "The Glorified Staymans." THE COLOR IS EQUAL TO THE SOLID RED OF THE JONATHAN AND THE TREES AND BUDS HAVE THE SAME HARDY CHARACTERISTICS AS THE OLD STAYMANS.

Don't surround your orchard with a question mark by buying and planting "Red Staymans"—know what you are planting and demand Blaxtayman. The most beautiful Stayman of all time. Colors a deep, brilliant, solid red all over without stripe, fully 3 to 4 weeks earlier than regular Staymans. The trees are hardy, vigorous, and spreading, bear early and very productive. The fruit is medium to large, skin smooth, flesh firm, tender and juicy, with a delightful sub-acid aromatic taste. Pronounced by many the finest of all dessert apples.

You Can Now Buy The Famous Blaxtayman And Richared At Extremely Low Prices. Only 5 Cents A Tree Higher On All Grades Than Standard Varieties Listed On Next Page.

RICHARED
TRADE MARK REG. U.S. PAT. OFF.
The DELICIOUS Supreme

ITS SUPERB QUALITY, ITS BEAUTIFUL BRIGHT, SOLID RED COLOR
TYPIFIES ITS NAME—"RICHER-RED"

The RICHARED DELICIOUS is a blood-red mutation of the Famous Delicious Apple. No orchardist can overlook these facts about the RICHARED. You have a tree of the same hardy characteristics as the old Delicious, producing an apple with that same appetizing delicious flavor, producing an apple that colors a full bright red, without a trace of stripe, on every part of the tree, the apple attaining this color weeks before we usually pick the regular Delicious, thus enabling everyone who grows it to eliminate the loss from drop apples, to pick earlier, to market earlier, if he desires to do so, to seek a foreign market with a high quality apple that has superior carrying qualities, when picked early and to keep it longer in storage for our late markets if desired.

There are many so called red variations of the Delicious apple being offered today but EVERY PLANTER SHOULD KNOW DEFINITELY WHAT TYPE RED DELICIOUS HE IS PLANTING. THE RICHARED DELICIOUS IS NOW FRUITING FROM COAST TO COAST AND IS A TRADE MARKED VARIETY THAT CANNOT BE SECURED FROM EVERY NURSERY. CAN YOU AFFORD TO GAMBLE THE FUTURE OF YOUR ORCHARD BY PLANTING JUST A RED DELICIOUS? KNOW WHAT YOU ARE PLANTING BY BUYING RICHARED DELICIOUS FROM BOUNTIFUL RIDGE NURSERIES.

FLASH!!

WE PRESENT THE
WRIXPARENT

(U. S. Plant Patent Applied For)

THE EARLIEST APPLE WE
KNOW OF IN CULTIVATION
TODAY

The "King" Of All Early Apples Destined To Revolutionize And Rejuvenate Early Apple Production.

Found as a chance seedling in the Yellow Transparent orchard of Mr. Wrixham McIlvain near Magnolia, Delaware about 1920.

Mr. McIlvain after several years observation determined the variety to be superior in every way to the Transparent and grafted over his Transparent orchard to this variety. This 2nd generation orchard at 16 years of age is now producing heavy annual crops. A 3rd generation orchard was planted in 1935 and began bearing at 4 years of age. The tree is more spreading than Transparent, vigorous and hardy in wood not being subject to blight and other fungus diseases. The fruit averages large in size being a little more flat in shape than Transparent and packing out commercial sizes of 2½" and 2¼" at picking time. The Wrixparent ripens from 10 to 15 days before the yellow transparent and ripens its fruits evenly so that the entire crop may be harvested in two pickings if desired. It is an attractive light green color without markings; the flesh is white, crisp, sprightly, very fine in texture and does not bruise readily or turn dark after bruising. Sub-acid in flavor and unsurpassed as a cooking apple. The fruit keeps well and can be held for 10 to 15 days after picking without storage. The Wrixparent is an annual bearer and continues to bear large fruits on the older trees.

Sales records show the entire 1939 crop was harvested and sold at rate of \$1.50 per ½ bu. for 2½" up and \$1.25 per ½ bu. for 2¼" U. S. No. 1 apples. Compare these prices with those you received for Yellow Transparent.

Our Supply Of Trees Is Very Limited This Year. Prices of Wrixparent Are 15c Per Tree More Than Other Standard Trees Listed On The Following Page In All Grades.

Brief Facts About The Wrixparent

1. EARLINESS—Ripens 10 to 15 days before Yellow Transparent.
2. ANNUAL BEARER—Normal to heavy crops each year.
3. LARGE SIZE—Apples under normal conditions pack out 2¼" and 2½" size and up.
4. QUALITY—Unexcelled as an early cooking apple.
5. SHIPPING ABILITY—Does not show bruises, will carry to distant markets, and will keep for weeks.
6. TREE IS VIGOROUS, SEMI-SPREADING GROWTH HABITS, BLIGHT RESISTANT, COMES INTO BEARING EARLY.

This Is A New Bountiful Ridge Introduction and Cannot Be Purchased From Any Other Nursery.

Warning: This is a patented variety and cannot be propagated for any purpose by anyone other than the Bountiful Ridge Nurseries.

(If Interested In Large Quantities Give Your Definite List For Letter Quotations.)

NOTE: Apple varieties listed in order of ripening as near as we are able to determine but variations may occur due to soil, fertilization, cultural and climatic conditions.

CRIMSON BEAUTY. Hardy grower, very productive, early bearer, earliest apple known. Flesh sub-acid, pleasant to eat; ripens July 1. 1 yr. trees only.

DUCHESS. Vigorous grower, Russian origin, large, striped tender juicy, sub-acid; regular bearer. Very hardy tree.

STARR. One of the finest early apples grown in New Jersey. Large to very large, green in color. Tree develops rapidly, fruits young.

MELBA. A McIntosh in quality and appearance, only more flat in shape. Canadian origin. Tree vigorous and productive. 1 yr. trees only.

RED GRAVENSTEIN. Large striped apple ripening after Duchess, good quality and ripens over several weeks time.

The New "CLOSE" Apple

A PRODUCT OF THE U. S. D. A. BUREAU OF PLANT INDUSTRY DEVELOPED BY PROF. C. P. CLOSE

This variety, tested as U. S. D. A. No. 57, ripens with or slightly ahead of the Yellow Transparent. It appears to adapt itself over a wide growing area. The fruit is medium to large size averaging 2 1/2"; fair to good quality, suitable for both dessert and cooking. The fruit develops a bright, attractive color when full ripe but when grown for the large commercial markets would have to be picked with 1/4 to 1/2 color. It seems to stand high summer temperatures well, thereby making it desirable in early apple producing areas of the South. The tree is vigorous, productive annual bearer and comes into fruiting while the trees are young. From our own observations of the apple we would say it resembles the Williams Early Red in shape and coloring habits except that the color of the CLOSE apple is a bright attractive red and shows up much better even in its early coloring stages. This variety has outstanding promise as an EARLY RED APPLE ADAPTED TO BOTH HOME AND COMMERCIAL ORCHARD PLANTINGS. We recommend that it be given trial wherever early apples are desired.

Our trees are limited this year and can only offer 1 year trees. 5c extra per tree on prices listed above.

YELLOW TRANSPARENT. Early bearer, fruit good size, skin clear, white to pale yellow, flavor very good. Ripens July 1-10.

LODI APPLE. The Lodi after being tested over quite a large area is now proving one of the most worthy Early Apples of recent introduction. It is of Transparent type only much larger and more firm. The tree is more spreading and vigorous and bears more regular than Transparent. It should be interplanted for cross pollinization. It ripens a few days later than Transparent but is large and can be picked with Transparent if desired. We ask no additional price for Lodi.

ANOKA. One of Prof. Hansens Hybrids and noteworthy for its beautiful red striped fruit and early bearing. The fruit is good quality ripening shortly after yellow transparent. 1 yr. trees only.

WILLIAMS EARLY RED. Largest of all early apples. Flesh white, juicy, tart, very good. Like Transparent bears young. July 10-15.

EARLY HARVEST (Yellow Harvest). Medium to large, beautiful, fine flavor. Ripens July 15-30. 1 yr. trees only.

EARLY MCINTOSH. A McIntosh hybrid being almost solid red in color, very crisp and juicy, with same high quality as the well-known McIntosh. A thrifty grower and regular bearer. Follows Transparent close.

2 year old BOUNTIFUL RIDGE GROWN APPLE TREES OF UNEXCELLED QUALITY such as these await your call to service at Bountiful Ridge Nurseries. Grown with exacting care, propagated from selected heavy producing strains these trees must and will give QUICK AND SATISFACTORY RESULTS.

The Worlds Most Eminent Authorities On Tree Identification Say Bountiful Ridge Trees Are "True to Name".

Amherst, Massachusetts
 August 20, 1938

TO WHOM IT MAY CONCERN:

This is to state that we have examined for trueness to name all the saleable apple, pear, cherry, and plum stock of Bountiful Ridge Nurseries, near Princess Anne, Maryland, and as they now stand in the Nursery Row all varieties are, to the best of our knowledge and belief, true to name.

A. P. French O. C. Roberts
 Prof of Pomology Asst. Prof. of
 and Plant Breeding. Pomology

MONMOUTH BEAUTY. One of the finest summer apples. Fruit large, excellent for cooking and eating.

MILTON. Typical McIntosh, coloring full red, very good quality. Tree hardy and vigorous. Ripens 3 to 4 weeks before McIntosh.

RED WARRIOR

Meets every demand for a mid-summer apple. It's beautiful all-over bright red color, large size, excellent quality and shipping ability should make it a leader for its season.

The tree is normally vigorous, grows naturally well formed similar to McIntosh, and bears regularly. The fruit is large to very large, many apples being four inches or better but normally averaging better than three inches. The skin is smooth and colored a brilliant bright red from stem to calyx without stripe. The flesh is white and fine texture and does not bruise easily. Its ripening season is about with Wealthy or a little earlier. It is sub-acid in flavor and is an excellent cooking apple. The apple is shaped nearly like a Staymans, being a little longer from calyx to stem. This apple has so many promising points that we felt it should have wider distribution and we secured permission to grow and distribute the variety.

WEALTHY. Fruit brilliant red, fine quality, best of its season, good keeper, adapted to cold climates, bears early. Used as a pollinator. Season August 15-25.

GLENTON. A seedling of the Northern Spy originating at the Canadian Experimental Station. A new apple ripening with and just after Wealthy. The trees are vigorous, nicely shaped and annual bearers. The apples are medium to large, highly colored with attractive red and good quality for either cooking or eating. We first observed the Glenton in the Ohio Experimental Orchards at Wooster. The beauty, quality and season of the apple were such that we felt it held real commercial possibilities. It should prove valuable as a good quality red apple to precede the McIntosh season.

SUMMER RAMBO. Large, flat, streaked red and yellow. Fine flavor, juicy, tender, productive. Ripens August 20-25.

TWENTY OUNCE. Fruit exceptionally large, sub-acid; color green slightly striped with red blush. Tree vigorous and one of our finest baking apples.

GRIMES GOLDEN. Highest quality fancy dessert apple. Ranks with Delicious and Jonathan. Medium to large, bright yellow, pink cheek. Trees hardy, highly recommended to pollinize. Ripens September 10-15. The old home orchard standby and a great apple wherever planted.

SMOKEHOUSE. Moderate bearing. Fruit yellow, striped with dull red, very attractive. Ripens September 10-20.

NORTHWEST GREENING. Tree vigorous, hardy. Fruit large to very large; clear green skin, yellow fleshed, fine grained and firm. Very attractive.

JONATHAN. A good commercial apple, hard to equal for hardiness and productiveness. Good quality, medium size, excellent eating and cooking apple. Used as filler and pollinator.

IMPROVED ALL RED JONATHAN. If you are not getting enough color on your Jonathan, plant this Improved strain. You will be satisfied with the results. Both 1 yr. and 2 yr. old trees available.

Eliminate Unprofitable Trees and Varieties - Plant Improved Types for Greater Profits

OHIO NONPAREIL (Red Bellflower). We relist this old variety in response to many requests from Ohio fruit growers. High dessert quality and fine appearance is responsible for its popularity. Originated near Massillon, Ohio, it has been extensively planted in many sections of the middle west as well as Ohio. The tree is medium in size and spreading in type. Fruit medium to large, round oblate in shape. Skin is yellow overspread with red-mottled and striped with bright red. Flesh yellow firm, crisp, tender, juicy and aromatic. Sub-acid in flavor. This fine old apple is hard to equal where quality is the factor.

OPALESCENT. Very large, brilliant dark red all over; tree bears young and very prolific. Quality good. Its beauty and size gives it ready sale.

YELLOW DELICIOUS

This apple has received national publicity during the last few years. It is famous for quality, which is hard to equal. This combined with fine, firm texture of flesh and its golden yellow skin, attracts the consuming public. Tree thrifty and extremely productive, bears early with abundant crop while very young.

McINTOSH

Tree vigorous with spreading head, good bearer; fruit medium to large, brilliant crimson, flesh snow-white, crisp, slightly aromatic, good quality. Ripens September 5-20. One of the greatest general purpose home and commercial apples ever introduced.

IMPROVED ALL RED McINTOSH. A special selected strain of the famous McIntosh apple. Solid red color without stripe. Finest type of the McIntosh Red strain at present. Both 1 yr. and 2 yr. old trees available.

KENDALL. Has attracted more attention from fruit growers than any other new apple of McIntosh season. Apples large, whitish, fine grained flesh of McIntosh. Flavor the same. Apples hang better than McIntosh.

LAWFAM. A product of Central Experiment farm Ottawa, Canada. A cross between Lawver and Fameuse and one of the most beautiful of the new McIntosh types of apples. Excellent quality. Fine tree growth and fruit hangs well to tree. A very deserving new type of the McIntosh which should be tried out promptly by fruit growers in the McIntosh districts.

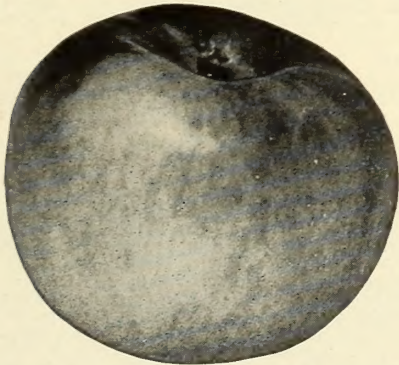

LOBO. Same season as McIntosh, larger apple, colors earlier, full red, extra quality. Recommended for Southern growers.

MEDINA. Delicious shape and appearance. Recommended by N. Y. Fruit testing asso. to prolong the Delicious season.

ORLEANS. Same season as Delicious only better keeper in common storage. The flavor resembles that of Staymans. Apple shape and color of Delicious.

WINTER BANANA. Vigorous grower, early bearer. Fruit smooth and golden yellow usually shaded with red blush, flesh fine grained, rich, sub-acid.

TOLMAN SWEET. Medium to large size, pale yellow, firm, rich and very sweet. Vigorous, hardy and productive.

THE CORTLAND APPLE

The **CORTLAND** apple becomes more and more popular on the large commercial markets each year. Its great beauty, unique quality, and unparalleled producing record for young trees and its adaptation over wide fruit growing areas will undoubtedly make the **CORTLAND** one of our most popular and profitable fall apples. No planting in the Central and Northern fruit sections is complete without a liberal planting of **CORTLAND**.

RHODE ISLAND GREENING. Fruit large and handsome. Dark green overspread with yellow. Flesh tender, rather acid, flavor excellent. Ripens September 25-30.

BALDWIN. No home orchard is complete without the Baldwin. An old favorite and one of the great apples in the northern sections. Noted for quality and long keeping merits. Tree very vigorous and productive.

RED CANADA (Steele's Red). This apple probably originated in New England where it has been extensively planted. In recent years the variety has gained much favor in central North West particularly in Michigan and Wis. The tree is medium to large, vigorous and upright in growth. The fruit medium to large, uniform in size and shape, coloring a beautiful deep red striped with deeper red on a background of yellow. Flesh is yellow, firm, crisp, aromatic, and juicy, pleasing sub-acid in flavor. There seems to be improved types of Red Canada and we have selected our propagating wood from producing trees of superior merit in Central Michigan. The variety also seems to give better results if top grafted on some other sturdy variety so all trees we offer this year are top grafted trees in the Nursery row on a thrifty growing intermediate stock. This is done at no additional cost to our patrons.

CORTLAND

Is an improved late McIntosh. The fruits of the two varieties are similar, but those of Cortland are more oblate, average larger, and are more uniform in size; they have more color and the red is lighter and brighter and the stripings and splashes are laid on differently; the taste of Cortland can hardly be distinguished from that of McIntosh; the flesh is firmer but just as juicy; the apples do not drop so readily and ship better.

The "COLORA" Red York

U. S. Plant Patent No. 168

THE "COLORA RED YORK" MARKS A NEW ERA FOR THE GREAT YORK IMPERIAL APPLE EARLIER COLORING—EARLIER PICKING—100% COLOR—GREATER PROFITS TO THE GROWER.

The tree of the **COLORA RED YORK** has the same rugged characteristic as the old type York Imperial. The variety has been well tested and even though we have observed other variations from the old fashioned York we do not know of any today that will give the grower the same attractive York type apple that the **COLORA RED YORK** will produce.

The "**COLORA RED YORK**" can be picked from one to two weeks earlier than the regular York Imperial if desired and the entire crop can be picked at one picking if desired with every apple passing U. S. No. 1 grade for color and enabling the grower to pack out a fancy grade of apples. There is no longer any reason for planting the old type York when better fruits and greater profits can be had by planting **COLORA RED YORK. MAINTAIN AND BUILD YOUR YORK PRODUCTION WITH "COLORA RED YORK."**

"THE COLORA RED YORK IS A BOUNTIFUL RIDGE INTRODUCTION AND IS GROWN AND FOR SALE EXCLUSIVELY BY THE BOUNTIFUL RIDGE NURSERIES."

5c per tree extra in all grades over other standard varieties as listed and priced.

YORK IMPERIAL. Fine, hardy, red Winter apple. Succeeds over a wide range of country. Bears four years from planting, regularly and heavy. Fruit of medium size, skin yellow covered with two shades of red. October 1.

ALBEMARLE—NEWTON PIPPIN. Large, smooth skinned, beautifully colored yellow apple. A valuable market variety. Tree long lived and productive.

NORTHERN SPY. Large, roundish-conical, slightly ribbed, handsomely striped with red, flavor rich, aromatic, mild sub-acid. Renowned for fine quality.

RED NORTHERN SPY. A typical Northern Spy except in color. The Red Spy colors a solid red without stripe or splashes.

MACOUN. Very highly colored, no stripe. Same quality as McIntosh, same texture fruit. Hangs better than McIntosh. Ripens 2 to 3 weeks after Cortland. Recommended to extend McIntosh season.

TURLEY. A Winesap seedling tree, vigorous grower, resembles Staymans, apples large, almost solid red, texture of fruit like Staymans. Productive.

STAYMANS WINESAP. Most profitable apple ever grown in the fruit areas of the Central States. Tree vigorous and hardy, early bearer very productive, fruit medium to large, skin smooth, slightly striped, colored to dull red. Flesh yellow, firm, rich, sub-acid, aromatic, a splendid late keeping variety. October 10-15.

ROME BEAUTY. Keeps in good condition until May and June. Large round, mottled and striped different shades of red. Flavor and quality average; always sells and brings good prices.

GALLIA BEAUTY

The Growers' Choice Wherever It Is Producing

It leads all other Red Rome Beauty type apples. It can rightfully be called "One Of America's Most Beautiful Apples." Demand the **Gallia Beauty** when planting the Red Rome type apple.

The **Gallia Beauty** originated in Ohio and is a typical Rome type tree, being thrifty, hardy and productive. The fruit of the **Gallia Beauty** colors

a brilliant bright red, without stripe and seems to be of higher quality than the regular Rome Beauty, and keeps exceptionally well in storage. The **Gallia Beauty** will size up equal to the regular Rome but many of the other inferior so-called Red Rome types will not size up satisfactory and again we urge you to plant only the Genuine **Gallia Beauty**. We offer you the best and charge you no more.

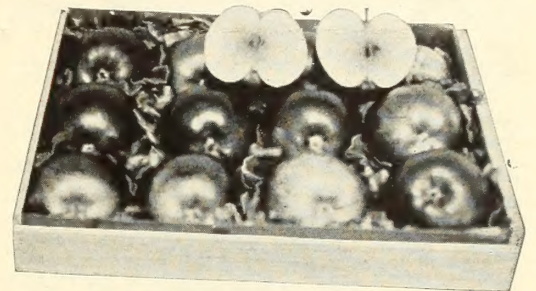

PARAGON. One of the best of the long keeping winter apples. Does well on most any soil; thrifty grower and fruits young bears regular. Winesap type, fine quality, nicely colored red with yellow flesh.

WINESAP. Medium size, dark red, juicy, mild. A favorite late winter apple and a leading commercial variety on all markets, as well as a very popular home apple in the West. A high-class dessert apple. Nov. 1st. to 10th.

BOUNTIFUL STRAIN

IMPROVED WINESAP

The Famous Winesap Apple Now Comes to The Planter In A Glorified Bud Selected Strain With Fruits Averaging 2½" Size With Same Beautiful Color—Same Quality—Same Keeping Ability.

3½" Apples

Bountiful Strain "IMPROVED WINESAP"

"Seek and ye shall find" is the motto at Bountiful Ridge in their search for New and Better fruits. For years fruit growers from many sections have clamored for a **LARGE WINESAP APPLE**. Many types have come to our observation and when traced down were found wanting until Mr. Harry W. Miller, President of the Consolidated Orchard Co., Paw Paw, W. Va., told us of this type they had producing in their well known Martins Mountain orchard and which when investigated proved to be more than he claimed and without question the finest type of Winesap apple ever to come under our observation.

The original tree stands in a block of the Regular Staymans Winesap and has not failed to produce a heavy crop now for 10 consecutive years, producing 25 bu. in 1938, the fruits being as large or larger some years than the regular Staymans on adjoining trees.

The fruit has every characteristic of the Old Winesap in shape, color, quality and growth habits and at harvest time Mr. Miller has been able to pack most of the apples in the 2½" up size, the balance going into the 2¼" grade. The tree is a typical Winesap tree in growth, having the exact leaf marking of the Old Winesap. The Miller Bros. are better known as the "Pioneer Orchardist of West Virginia" and are producing more apples than any other individual or family group in the State today. We are proud that approximately 70% of their producing orchards are trees we grew for them. They are known almost nationally as authorities on fruit production and varieties. It is fitting indeed that an improved type of the Famous and Nationally known Winesap apple should originate in their orchards. We know this will revive planting interest in this great apple. We have a fine lot both one and two year trees of this **IMPROVED WINESAP** this year and **WE ARE SELLING THESE TREES AT NO ADDITIONAL COST TO THE PLANTER.**

CRAB APPLES

Prices same as other standard apple trees.

HYSLOP. Fruit medium, deep crimson and splashed with maroon. Flesh fine, tree vigorous where hardy.

TRANSCENDENT. Season September. Fruit brownish-yellow blushed with carmine. Flesh firm, tree vigorous grower, hardy.

DOLGA. A handsome red crab apple of medium size. The fruit jellies easily. Tree vigorous, hardy and productive.

VIRGINIA CRAB TREES

Considered by many authorities to be superior for top grafting, bridge grafting, and in arch work because of its resistance to low temperatures, fire blight and other virus diseases. We offer both one and two year trees in grades and prices of standard apples.

The Wise Man Selects and Plants Bountiful Ridge Grown Stock

Our Prices Low - Our Stock is Superior. Why Pay More?

SWEET CHERRY TREES

We have a fine lot of 1 year sweet cherry that are hard to equal. You will find these trees ideal for orchard planting.

Can supply varieties * in one year stock on Mazzard Root all grades. 5c extra per tree.

	Each	10 to 50	50 to 300
Large size, 2 yr., 11/16" cal.....	\$.75	\$6.00	\$55.00
Medium size, 2 yr., 9 to 11/16 cal..	.60	5.00	45.00

Small size, 1 yr., 2 ft. up, 5/16" cal.	.50	4.00	30.00

***SENECA.** Earliest good sweet cherry, ripens 2 weeks before Black Tartarian, large, purplish-black, melting, flesh very sweet. Tree vigorous and productive.

***BLACK TARTARIAN.** Very large, bright purplish black, juicy, rich, trees vigorous and an erect grower. June.

BING. This black cherry succeeds everywhere. Flesh solid, flavor the highest. Fine shipping and marketing variety. July.

LAMBERT. Largest of all cherries, purple-red, firm and rich. Grows well.

***NAPOLEON BIGGAREAU** (*Royal Ann). Beautiful cherry of large size, pale yellow with bright red cheeks, flesh firm, juicy, and sweet.

***SCHMIDT'S BIGGAREAU.** Fruit very large size, deep mahogany color, juicy, and fine flavor. Fruit grows in clusters. July.

***WINDSOR.** Tree vigorous and rapid grower. Fruit large, firm and juicy, quality good, heavy bearer, almost black in color. July.

GOVERNOR WOOD. Large, heart-shaped; light yellow, mottled light red, juicy, sweet and rich. Tree vigorous, productive; forms a round head. An old variety still a favorite in many regions.

POLLY ANNE. A large grey heart sweet cherry known to this section as oxeart. Very delicious and regular bearer. Tree thrifty and productive. Especially adapted to home use and nearby markets. 1 year trees only.

SWEET SEPTEMBER CHERRY

New Fall Bearing

There is no previous record in the history of Horticulture of a Fall-bearing cherry. The fruits are an attractive medium dark red similar to the Windsor, deliciously sweet, excellent for eating fresh or canning. It ripens in Ohio about September first.

	Each	10 to 50
3-4 feet	\$1.50	\$1.45

SOUR CHERRY TREES

2 year Sour Cherry Trees 5c per tree less than 2 yr. Sweet Cherry Trees.

MONTMORENCY CHERRY on Mazzard Root 5c per tree more.

ENGLISH MORELLO. Easily grown, generally producing a heavy crop. Fruit dark red, quality good; rich, acid flavor; late. Hardy for extremely cold latitudes. August.

EARLY RICHMOND. One of the most valuable and popular cherries, unsurpassed for cooking purposes. It is the good old variety that yields such marvelous crops in the gardens. The most hardy of all varieties, uninjured by the coldest winters.

LARGE MONTMORENCY. This is the best of all the sour varieties of Cherries. There is a greater demand on the market for this Cherry than any other. The trees are the cleanest and best growers and are less subject to disease, less affected by wet weather, and are the best bearers of the best fruit of all other sour varieties. No matter how unfavorable the season may be, Montmorency can be depended upon for a full crop. The Montmorency is a good shipper, very attractive looking, and always brings good prices.

BRASSINGTON. Tree upright dense, very productive. Fruit averages 3/4 to 1 in. in diameter, attractive, round, light red color, juicy, sub-acid, pleasant flavor; a faint reddish tinge permeates the yellow flesh. Fruit characters are intermediate between sweet and sour cherries. A fine cherry becoming more popular and especially desirable for local markets and home use.

FIG TREES

MAGNOLIA FIG. One of the hardiest species, doing well where the winters are not too severe. Fruit very large and of rich straw color. Fruit begins to ripen the last of June and continues to put on new fruit until frost. 2 to 3 feet, 80c each; \$6.00 for 10; \$50.00 for 100.

One year Sour Cherry trees grown the "Bountiful Ridge Way" in our Nursery at Princess Anne. These trees mostly of the 9/16 and 11/16 grade at one year old mean a successful orchard to the planter.

WAITE PEAR

WE HAIL A NEW PEAR OF COMMERCIAL POSSIBILITIES 10 TIMES MORE BLIGHT RESISTANT THAN THE KEIFFER.

A product of the U. S. D. A. Bureau of plant industry developed by Mr. M. B. Waite. The Waite pear, previously tested at No. 66131 is outstanding in blight resistance never developing, under severe test conditions, more than 10% as much blight as the Keiffer. The fruit resembles that of Bartlett and is about same size, ripening about same season as Keiffer. The flesh is smooth in texture and is almost free of grit cells. It is more acid than Bartlett but is excellent for cooking and canning and fairly good for dessert purposes. The tree is rather slender, willowly grower and of moderate vigor. Requires cross pollination for consistent heavy crops. We state that every pear grower should give this pear a trial planting as it may prove the pear we have been seeking. **OUR SUPPLY IS LIMITED TO ONE YEAR TREES ONLY. THE PRICE IS 15c PER TREE EXTRA OVER OTHER STANDARD PEARS AS LISTED ABOVE.**

DOUGLAS. One of the hardiest, most blight resistant, and productive varieties now being grown which still has fair to good quality. Douglas is a seedling of Keiffer, bears very young and better quality than Keiffer. 1 year trees only.

BARTLETT. Large size, golden-yellow when ripe with beautiful blush next to sun. Buttery, juicy, highly flavored. Tree strong grower, bears early and abundantly. August and September.

CLAPPS FAVORITE. Large, fine pear resembling Bartlett. Melting, buttery, juicy with delicate flavor. Tree hardy and productive. August and September.

BUERRE BOSC. Large, yellow pear, flesh white, rich and delicious. Keeps until Christmas.

GORHAM. Ripens 2 weeks later than Bartlett, keeps longer. Fruit like Bartlett in size, color and shape. Flesh white and highly flavored. Very blight resistant. 5c extra per tree.

OVID. Ripens later than Gorham. A Bartlett type pear very large in size, good flavor, white fleshed. A very late keeping Bartlett type pear. 5c extra per tree.

DUCHESSE D'ANGOULEME. Very large, greenish-yellow, sometimes russeted. Makes a beautiful tree, heavy bearer, buttery, melting and sweet.

ANJOU. Large fine pear, buttery and melting. Tree fine grower, productive. October to January.

FLEMISH BEAUTY. Large, juicy, and rich. A strong grower and good bearer, hardy but prefers sunny location. September and October.

SECKEL. Small, rich, yellowish-brown. One of the best flavored pears known. September and October.

KEIFFER. Tree practically immune to blight, very thrifty and bears consistently heavy crops. Fruit large to very large, golden-yellow, often blushed, juicy and one of the best pears. Keiffer has been very profitable in recent years.

SHELDON. Large, round, russet and red pear, very rich fine quality. Tree vigorous, bears well. October.

QUINCE TREES

All Varieties. 2-year, 4 to 5 Feet, 5-8 inch Caliper, 70c each; \$6.00 per 10.
1 yr. 3-4 ft., 65c each; \$5.00 for 10.

ORANGE. Roundish bright golden yellow, very large, fine grained, fine quality. Best for cooking. Firm, will stand shipping.

CHAMPION. Fruit very large, fair and handsome. Bears abundantly while young; flesh cooks as tender as an apple without hard spot and cores; flavor delicate; quince taste.

PLUM TREES

	Each	10 to 50	50 to 300
Largest size, 2 yr., 5-6 ft.....	\$.70	\$6.00	\$45.00
Medium size, 2 yr., 4-5 ft.....	.60	5.00	40.00
Very fine, 1 yr. buds, 4-6 ft.....	.60	5.00	35.00
Medium size, 1 yr., 3-4 ft.....	.50	4.00	28.00
Small size, 1 yr., 2-3 ft.....	.40	3.00	22.00

All plum trees budded on Myrobalan Plum root which induces longer life, more healthy and vigorous trees and better crops.

FELLEMBURG or ITALIAN PRUNE. Our most popular Commercial plum. It succeeds under most all climatic and soil conditions. The fruit is dark purple with a dark blue bloom medium to large size, oval, pointed and tapering. The flesh is juicy and delicious and it is very fine for drying and canning. It is fast replacing the German prune in commercial plum orchards. We are glad to say we have a fine lot of one year trees of this splendid variety to offer this year. This plum and the Early Italian prune we are selling make a very profitable combination.

GERMAN PRUNE. Esteemed for drying and preserving. Large, oval, purple with heavy blue bloom. Flesh firm. September.

IMPERIAL GAGE. Large, oval, yellowish-green, flesh greenish, juicy, best quality. September.

LOMBARD. Medium round oval, violet-red, juicy, pleasant. Clings. A good market sort. Hardy.

SHROPSHIRE DAMSON. Fruit oval, medium size, produces clusters, good fruit for preserving.

DAMSON. Old fashioned blue damson known to every housewife for the fine jelly and preserves they make. Prolific bearers.

ABUNDANCE. Yields abundantly, medium size, bright cherry red, highly perfumed, flesh yellow, juicy and tender, excellent quality. Tree vigorous, hardy.

BURBANK. Medium to large, orange-yellow, dotted, mottled with red. Flesh yellow, good for canning and market. Hardy, prolific.

BRADSHAW. Very large dark violet-red, flesh yellowish-green, juicy, pleasant. Tree vigorous.

WICKSON. Largest of all Oriental Plums. Tree upright in growth bearing good crops under proper conditions. Fruit large, dark red over a yellow ground, splashed and mottled with darker red. Flesh amber yellow, juicy, firm, pleasant and sweet in flavor. Stock limited. 1 year trees only.

NEW PLUMS

10c per tree higher than regular plums listed above in all grades.

STANLEY. A cross between Agen and Grand Duke. The fruit is of the prune type, excellent for cooking or eating out of hand. The tree is healthy, vigorous and produces full crops annually. Fruit is large in size, dark-blue with heavy bloom; flesh, greenish-yellow, juicy, fine-grained, tender, firm sweet, pleasant; quality, good to very good. Freestone. Mid-season. Stanley is one of the New York Experiment Station's prize plums.

EARLY ITALIAN PRUNE. Same size, quality and color as Italian Prune but two weeks earlier. 1 yr. trees only.

ALBION. Tree is productive, strong, and vigorous. Fruit is of Grand Duke type only larger and better quality. Ripens very late. One of the most remarkable of the new plums. Stock limited. 1 yr. trees only.

IMPERIAL EPINEUSE. An old French plum of prune type. Reddish-purple, tender, sweet, juicy and one of the best flavored of old world plums. The fruit ripens late and so escapes brown rot to a large degree. The trees grow wonderfully well in the East and can be classed the plum of plums for the garden. Should be cross pollinated for best results. One year trees only.

FRENCH DAMSON. Very vigorous grower, the fruit surpassed all other fruits in its group. The fruit is very large, good quality and a beautiful plum, making it very popular on the commercial market. An abundant bearer, season a little after Shropshire Damson and conceded to be superior to that variety. 1 year trees only.

Early Profit-Makers For Every Farm

A DEPENDABLE SOURCE OF INCOME THAT PAYS BIG DIVIDENDS ON LOW INVESTMENTS
STRAWBERRIES, RASPBERRIES, BOYSENBERRIES, DEWBERRIES, ETC.

The New Boysenberry

Its Large Size, Superb Quality, Heavy Bearing and Adaptability Make the Boysenberry A Welcome Addition to The Small Fruit Family

Said to be the largest and finest berry ever introduced. It is a new variety produced by crossing the Blackberry, Raspberry, and Loganberry. The flavor is a very pleasing blend of these varieties. Berries are extremely large, many of them getting more than 2 inches long and over 1 inch in diameter. Comes into bearing the next year after planting and one planting lasts for many years. It is a vigorous grower and should not be planted closer than 6 ft. apart. Succeeds better when trained on wires similar to grapes. The fruiting season is longer than most vine berries, lasting about two months. It is not unusual to pick 20 baskets of berries to the plant the second year after planting. We recommend this wonderful berry to you for a trial in your next planting and feel it will prove a valuable addition to your present list of small fruits.

Typical Bountiful Ridge Grown Plants

The New Yellows Resistant BLAKEMORE

The Central East's greatest early commercial berry now offered in the yellow resistant strain. Stock plants released by U. S. D. A. for general propagations 1937. During three growing seasons here in our nursery the plants of this new type Blakemore have not shown a single plant of the so-called yellows disease. Last year we sold nearly one-half million plants of this type Blakemore and again offer a large quantity of them for this year's distribution and every grower of the Blakemore variety should plant nothing else but these yellows resistant strains of this wonderful berry.

BLUEBERRIES PROVE EXTREMELY PROFITABLE FOR MR. A. G. BISHOP

Vincenttown, N. J.
Oct. 21, 1938

Bountiful Ridge Nurseries,
Princess Anne, Md.
Gentlemen:

My five acres of Blueberries produced in 1937 and 1938 an average of 15,000 quarts.

Our markets here averaged from 20 to 40 cents per quart depending on quality of fruit. I consider Blueberries my best paying crop.

Very truly,
A. G. Bishop

GRAPE VINES

The large cultivated Blueberry seemingly has unlimited possibilities as a fresh fruit or a canned berry. The plants thrifty, and very productive of large delicious berries that bring high prices wherever sold. Adapted to nearby and distant markets. They have a place in every farm and home garden lot. We list below the best of our present day varieties.

Complete cultural direction mailed upon request.
Note: Varieties listed in order of ripening. First fruit picked in south New Jersey usually about June 15th to 20th.

CABOT. One of the earliest of the blueberries. Very vigorous and develops naturally to well formed plants. A favorite of the commercial grower because of its earliness, its dependable and heavy bearing habits and the large size of its well formed berries.

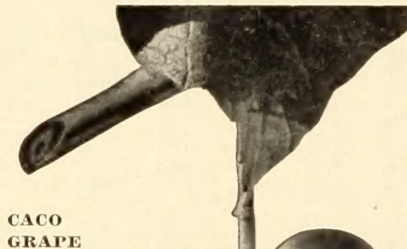

RANOCAS. The bush of slender, vigorous, upright habit rarely surpasses five feet in height. The winter twigs are a dark red. The berries are somewhat larger than those of Rubel and begin to ripen several days earlier.

PIONEER. Named by Dr. Coville of the U. S. Department of Agriculture. The bushes are stocky, seldom exceeding 4 feet in height with a tendency to be broad rather than high. Its stems are stout and stiff and the winter color of the young growth is a delightful red. Pioneer produces heavy crops of berries close set in the cluster. They are larger than Rubel; of medium blue color and fine flavor.

CONCORD. The bush is of upright habit and at maturity exceeds six feet in height. The young growth is bright red in winter. The berries are large, frequently reaching three-quarters of an inch in diameter. They usually ripen a few days earlier than Rubel and are fine in flavor and appearance.

RUBEL. Well developed bushes stand six feet or more high, vigorous and beautiful. The stems are slender, but sturdy. The winter color of the young wood is a rich red. The large berries are of a fine blue color. Planted extensively for commercial fruit production.

JERSEY. The bush is of vigorous habit and grows very large. The winter color of the young growth is a light red over golden brown. The berries are the largest of any here listed, of a very light blue color and ripen about the same time as Rubel.

"It's Not A Home Until It's Planted"

Plant Bountiful Ridge Grown Stock for Permanent Beautiful Homes and Lawns

Flowering and Ornamental Trees

JAPANESE BLOOD LEAF MAPLE. We offer this rare and beautiful tree in grafted stock. A good dwarf tree with rich purplish red leaves. 18 to 24 inch, \$1.50 each; \$12.50 for 10.

BECHTEL'S DOUBLE FLOWERING CRAB. Most beautiful of the flowering crabs; tree medium size, covered in early spring with large, double fragrant flowers, delicate pink. 2 to 3 feet, 60c each; \$5.50 for 10; 3 to 4 feet, 75c each; \$7.00 for 10.

JUDAS TREE or RED BUD. The profusion of delicate reddish-pink blossoms with which it is covered in early spring before the foliage appears make it one of the finest ornamental trees. 3 to 4 feet, 50c each; \$4.50 for 10.

DOGWOOD, WHITE FLOWERING. Large white flowers appear in the spring before the leaves. Scarlet fruits are borne in the autumn and the leaves turn to a deep red. 3 to 4 feet, 75c; \$6.00 for 10; 4 to 5 feet, \$1.00; \$9.00 for 10.

DOGWOOD, PINK FLOWERING. A colored form of the native species Dogwood. Rose-colored blossoms. Nice 2 to 3 feet trees, \$1.50 each; \$12.50 for 10; 3 to 4 feet, \$2.00 each; \$18.50 for 10.

MAGNOLIA SOULANGEANA. Best known of the deciduous Magnolias. Hardy and a very beautiful plant when in bloom. Blossoms large purplish-pink and white, and usually appear on the plant just before the leaves come out. 2-3 ft. light plants, \$2.00 each; 18-24 inch, \$1.50.

FLOWERING CHERRY

KANZAN. Large, double, pink blossoms borne in profusion. 2-year 6-foot trees, \$2.00 each.

MT. FUJI. Without a doubt the very best double white flowering cherry. Tree upright in growth, but droops naturally when in bloom. Large 2-yr. 6-foot trees, \$2.00 each.

AMANAGAWA. Large, double blossom, not so intense pink as Kanzan; forms a beautiful tree and should be in your collection. 2-year, 6-foot trees, \$2.00 each.

NADEN. Large pale pink flowers, being very double. Tree upright and spreading; presents a most beautiful sight when in bloom. 2-year, 6-foot, trees, \$2.00 each.

KOFUGEN. One of the most profuse blooming flowering cherry. Flowers are very large and very double, sometimes being almost pure red. Tree vigorous, spreading. Should be in every planting if you wish real beauty. 2-year, 6-foot trees, \$2.25 each.

Japanese Weeping Cherry

SUBHIRELLA. Weeping double flowering cherry. Profusion of large pink blossoms in early spring. make it a favorite. 5 to 6 ft. stems, 2-year grafted heads, \$2.75 each.

Other Weeping Ornamental Trees

SHIPPED ONLY BY EXPRESS or FREIGHT

TEA'S WEeping MULBERRY. A graceful hardy tree, forming a umbrella-shaped read, with willow-like branches drooping to the ground; foliage small, lobed, and fresh, glossy green. First-class 2-year heads, 5 to 6 foot stems, \$2.00 each; \$17.50 for 10.

WEeping WILLOW, BABYLONIAN. The well-known common weeping willow; makes a large tree covered with drooping branches. 6 to 8 ft., \$1.00 each; \$9.00 for 10.

CUT LEAF WEeping BIRCH. One of the most beautiful weeping trees. Pyramidal in growth habit. Dark green leaves and shiny white bark. 5-6 ft., \$1.50 each; \$14.00 for 10; 6-8 ft., \$1.75 each; \$16.00 for 10.

ORNAMENTAL HEDGES

THERE IS A PLANT FOR EVERY PURPOSE
Select Them and Plant at These Low Prices.

NEW RED LEAF BARBERRY. Similar to Barberry Thunbergi but the foliage of this new variety is of a rich, lustrous bronzy red. Becomes more brilliant throughout the summer. 6 to 9 in. seedlings, 10 for \$1.00; 100 for \$8.00. 12 to 15 in. transplants, 10 for \$2.25; 100 for \$20.00. 15 to 18 in. transplants, 10 for \$2.75; 100 for \$25.00.

JAPANESE BARBERRY. A pretty dwarf species. Handsome foliage of bright green leaves which turn to the most brilliant shades of coppery red and orange in autumn and which remain on until late Fall. Lined with small scarlet berries which hang on until well into winter. 9 to 12 in. seedlings, 10 for 50c; 100 for \$3.50; 1000 for \$30.00. 12 to 15 in. transplants, 10 for \$1.25; 100 for \$12.00; 1000 for \$100.00. 18 to 24 in. transplants, 10 for \$2.50; 100 for \$20.00; 1000 for \$180.00.

AMOR RIVER PRIVET NORTH. A valuable ornamental shrub for hedges and borders; very hardy; foliage glossy green, and holds its color almost the entire year; will stand shearing to any extent. Well branched. 12 to 18 in., 10 for 80c; 100 for \$7.00; 1000 for \$50.00. 18 to 24 in., 10 for \$1.00; 100 for \$8.00; 1000 for \$65.00.

CALIFORNIA PRIVET. California Privet will give you living fences for less than you can build them of wire. Can be sheared into any shape or size. 12 to 18 inches, 40c per 10; \$3.00 per 100; \$25.00 per 1000; 18 to 24 inches, 60c per 10; \$4.00 per 100; \$35.00 per 1000.

FLOWERING SHRUBS

THE BEST OFFERED AT THE LOWEST
PRICES IN OUR HISTORY.
BUYS YOU MAY NEVER BE ABLE
TO DUPLICATE

In many cases it would be better to plant Shrubs in groups of several to one side of the lawn instead of following the method of planting one in a certain place and spoiling the effect of the open lawn. In most cases, three, six, eight or twelve of one variety should be used in a particular grouping. Several such groupings make an excellent border or foundation planting.

ALTHEA (Rose of Sharon). Double, assorted colors; red, white, lavender and blue. 2 to 3 feet, 25c each; \$2.00 for 10.

BUTTERFLY BUSH. Blooms profusely; lilac-color, tapering panicles. No. 1 plants, 2-year, 18 to 24 inch, 30c each.

NEW RED LEAF BARBERRY. Similar to Barberry Thunbergi but the foliage of this new variety is of a rich, lustrous, bronzy red. Becomes more brilliant throughout the summer. 12 to 15 inch, 30c each; \$25.00 per 100; 18-24 in. 50c each; \$2.00 for 10.

BEAUTYBUSH. General resemblance to both Weigela and Honeysuckle, beautiful trumpet-shaped flowers. Pale pink with orange veins in the throat. 18 to 24 inch, 45c each; 5 for \$2.00.

INDIAN CURRANT. Valuable for planting in shady places; foliage is very persistent. The fruit is purplish-red. 18 to 24 inch, 25c each; \$2.00 for 10; 2 to 2 ft., 35c each; \$3.00 for 10.

SNOWBERRY. An upright low-growing shrub with pink flowers. Showy white berries in fall. 2 to 3 ft., 40c each; \$3.50 for 10.

DOGWOOD (Red-Twigged Dogwood). Good for border groupings, where the smooth, slender, bright red branches in winter make a very pleasing contrast with evergreen and snow. Thrives in shade. Height, 6 to 8 feet. 2 to 3 feet, 25c each; \$2.00 for 10.

CREPE MYRTLE. Blooms throughout the summer great clusters of delicately fringed flowers. Perfectly hardy as far north as New Jersey. We have pink and red. 18 to 24 inch, 50c each; \$4.50 for 10.

DUETZIA (Pride of Rochester). Produces white flowers tinged with rose; vigorous grower. 18 to 24 inch, 25c each; \$2.00 for 10; 2 to 3 feet, 30c each; \$2.50 for 10.

DUETZIA LEMOINE. Dwarf habit of growing. Literally covered with snow-white flowers. 18 to 24 inch, 40c each; \$3.50 for 10.

FORTUNE'S GOLDEN BELL. Flowers bright yellow and appear before the leaves very early in the spring. 2 to 3 feet bushes, 30c each; \$2.50 for 10.

FORSYTHIA (Intermedia). Blooms early, frequently covered with golden flowers while the ground is still covered with snow. 2 to 3 foot plants, 30c each; \$2.50 for 10.

FORSYTHIA VERDISSIMA. Flowers deeper yellow and somewhat twisted. 2 to 3 foot plants, 30c each; \$2.50 for 10.

FLOWERING ALMOND, DOUBLE PINK. Covered in May with rose-colored blossoms like small roses; hardy. 18 to 24 inch, 40c each; \$3.50 for 10.

COMMON SNOWBALL

HONEYSUCKLE, PINK TARTARIAN. Pink flowers that make a lovely contrast with the foliage. Fine 2 to 3 foot bushes, 30c each; \$2.50 for 10.

EUROPEAN CRANBERRY BUSH. Large bunches of crimson berries throughout winter. The flowers are pure white. 2 to 3 ft., 40c each.

JAPAN QUINCE SCARLET. Flowers a bright scarlet crimson; foliage bright glossy green. 18 to 24 inch, 40c each; \$3.50 for 10.

HYDRANGEA ARBORESCENS STERILIS (Hills of Snow). Handsome foliage and snow white, ball-shaped clusters of flowers. Blooms the greater part of summer. 18 to 24 inch, 35c each; \$3.25 for 10.

HYDRANGEA (Paniculata Grandiflora). A shrub; flowers borne in huge panicles; light pink; blooms in August and September. 2 to 3 ft., 40c each; \$3.25 for 10.

HYDRANGEA P. G. (Tree Form). Same as above except trained to single stem with well-formed top. 3 to 4 foot stems, well topped, \$1.00 each; 4 to 5 ft., \$1.50 each.

HYDRANGEA OTAKSA. Flowers generally blue, with a few exceptions, when they are a delicate pink. 2-year No. 1 plants, 75c each; \$6.50 for 10.

LILAC, WHITE. Its flowers are white and fragrant. Fine 18 to 24 inch, 40c each; \$3.50 for 10.

LILAC, PURPLE. The well-known purple variety. Fine 18 to 24 inch, 40c each; \$3.50 for 10.

LILAC, (Persian). A favorite among the purple lilac. 18 to 24 inch, 50c each; \$4.50 for 10.

LUDWIG SPAETH LILAC. Single, dark purplish red. 18 to 24 inch, 50c each; \$4.50 for 10.

PRESIDENT GREY LILAC. Double, bright blue. 18 to 24 inch, 50c each; \$4.50 for 10.

SNOWBALL COMMON. The old-fashioned Snowball; pure white flowers May and June. Fine 2 to 3 feet, 45c each; \$4.00 for 10.

JAPANESE SNOWBALL. Pure white blossoms. 18 to 24 inch, 50c each; \$4.50 for 10.

PINK KOREAN SNOWBALL. Blooms profusely in early spring; flowers are pink. 12 to 18 inch strong plants, 80c each; \$7.50 for 10.

OAK LEAF HYDRANGEA. One of the best of the newer types of hydrangeas. Upright to drooping in growth, attractive foliage. Blossoms are compact large pinnacles similar to hydrangea P. G. coming early in the season and remaining on the plant until September. Flowers changing in color from white to pink. A beautiful plant that you will enjoy. 2 to 3 ft. plants, 60c each; 10 for \$5.00.

SPIREAS VAN HOUTTE. Most popular of all the Spireas. Its gracefully arching branches heaped as they are with the white blossoms in spring and its thriftiness under the most trying conditions are the reasons for its popularity. 18 to 24 in., 20c each; \$1.50 for 10; 2-3 ft., 30c each; \$2.50 for 10.

SPIREA ANTHONY WATERER. Popular low-growing bush, blooms all summer. Flower deep rose. 35c each; \$3.00 for 10.

SWEET SCENTED SHRUB or CALYCANTHUS. Wood is scented, the foliage rich and flowers of a rare chocolate delightful odor. The old fashioned shrub bush that used to be in every yard. 2 to 3 ft., 40c each; \$3.50 for 10.

PHILADELPHUS, Grandiflora (Mock Orange). Large spreading bush, graceful drooping branches; flowers slightly fragrant. 2 to 3 ft., 30c each; \$2.50 for 10.

PHILADELPHUS, Virginialis (New). Finest of the new Mock Oranges. Very large flowers. 2 to 3 ft., 30c each; \$2.75 for 10.

PHILADELPHUS, Coronarius (Mock Orange). Pure white, very fragrant flowers; first to bloom. 2 to 3 ft., 30c each; \$2.50 for 10.

TAMARIX AFRICANA. Upright habit, with airy, slender leaves; profusion of dainty, soft pink flowers in May. 1 1/2 to 2 ft., 30c each; \$2.50 for 10.

WEIGELA EVA RATHKE. Flowers a brilliant crimson; a beautiful bush. 18 to 24 inch bush, 40c each; \$3.00 for 10.

WEIGELA ROSEA. Fine rose-colored flowers appearing in June. 2 to 3 ft., 35c each; \$3.00 for 10.

BEDDING HYACINTS

For garden planting we recommend these medium-sized Hyacinths by color. Splendid bulbs that will bloom magnificently.

	Doz.	25	100
Snow White	.85	\$1.60	\$5.90
Soft Pink	.85	1.60	Dark Blue .90 1.75
Bright Red	.90	1.75	Pure Yellow .90 1.75

COLLECTION 'M'. 5 bulbs each of the above 6 Hyacinth colors. 30 for \$1.90. Separately packed and labeled.

LARGE FLOWERING CROCUS

A place for these gay "Heralds of Spring" can be found in every garden. Plant them as an edging to beds, in careless patches in the lawn, in the rock garden, in masses among shrubs, or on slopes of terraces and you will enjoy them every Spring for many years.

	Doz.	25	100
Bright Blue	.30	\$.50	\$1.90
Golden Yellow	.30	.55	1.90
Pure White	.30	.50	1.80
Purple Violet	.30	.55	1.90
Lilac Striped	.25	.45	1.60

COLLECTION 'Q'. 20 bulbs each of the above 5 Crocus colors. 100 for \$1.90. Separately packed and labeled.

CROCUS—All colors mixed for Naturalizing.

Give a splendid effect when scattered through the lawn, woods or fields. 40c for 25; \$1.30 for 100.
